Cooling system

Recommended coolant: 50% inhibited ethylene glycol or 50% inhibited propylene glycol and 50% clean fresh water. For combined heat and power systems and where there is no likelihood of ambient temperature below 10 °C, then clean 'soft' water may be used, treated with 1% by volume of Perkins inhibitor in the cooling system. The inhibitor is available in 1 litre bottles from Perkins. Total coolant capacity (engine only) 36 litres Maximum jacket water pressure in crankcase 1 bar (plus static pressure head)

Fuel system

Recommended fuel: Natural Gas LHV at 34 MJ/m³ (930 Btu/cu.ft). Other fuels may be used, for example landfill or digester gas. Ratings will vary from those shown.

Where fuels other than Natural Gas are being considered it is imperative that a full gas analysis (including details of any solid or liquid components) be obtained. Reference should be made to Perkins Engines Company Limited to determine suitability. Gas supplies must be filtered to the same standard as the engine intake air (i.e. Maximum particle size not to exceed 50 microns).

Gas supply pressure 1,5 kPa to 5 kPa at full rated flow
Carburettor type Deltec with zero pressure regulator
Installation of gas supply and shut off valves to be in accordance with local regulations.

Starting requirements

Temperature range	
Down to 0 °C (32 °F)	Oil: Refer to Perkins Engines Company Limited Starter: 1 x 24 volts Battery: 2 x 12V Total Ah 232 Inrush current to starter: 1000 amps Cranking current: 600 amps Starter cable size: 70 mm ² Maximum length: 6 m

Notes:

- Engines **not** equipped with additional A:F ratio control will require immersion heaters to be fitted when ambient temperatures are below 15 °C
- Engines fitted with additional A:F ratio control will start unaided down to 0 °C
- The battery capacity is defined by the 20 hour rate.
- The starting ability of an engine with immersion heater will be improved by about 10 °C and the start aid specification can be modified accordingly. The oil specification should be for the minimum ambient temperature as the oil will not be warmed by the immersion heater.
- Breakaway current is dependant on battery capacity available. Cables should be capable of handling the transient current which may be up to double the steady cranking current.
